

Quick System Pro

The Quick System Pro is a great system for larger events. It quickly rolls out in three self-contained units. The durable Control Cabinet is constructed with 18 mm, 13-ply euro-birch hardwood finished in lacquer. It is fitted with easy rolling industrial grade wheels. All of the electronics are securely mounted inside where they are easy to get to and well protected from damage, loss, and theft. A locking door is standard. Storage is also provided for cables, microphones, and manuals. The two portable loudspeaker systems include a ground shaking 18" subwoofer plus a pole mounted high-output 2-way full-range loudspeaker. The full-range loudspeaker securely stores on the portable subwoofer cart along with the cables and pole mount. Setup and operation is simple, all connections and controls are clearly marked so anyone can get great results.

The Quick System Pro can be easily scaled up for larger audiences by adding extra subwoofer/full-range loudspeaker stacks and amplification.

We also offer the Quick System Pro in an Active loudspeaker version. Contact us and we'll help guide you based on your event requirements.
